## 2024\_28\_III\_OOPS Using Java Lab

### 2028\_REC\_OOPS using Java\_Week 3\_Q4

Attempt : 1

Total Mark : 10

Marks Obtained : 10

#### **Section 1 : Coding**

##### **1. Problem Statement**

Sesha is developing a weather monitoring system for a region with multiple weather stations. Each weather station collects temperature data hourly and stores it in a 2D array.

Write a program that can add the temperature data from two different weather stations to create a combined temperature record for the region.

##### ***Input Format***

The first line of input consists of two space-separated integers N and M, representing the number of rows and columns of the matrices, respectively.

The next N lines consist of M space-separated integers, representing the values of the first matrix.

The following N lines consist of M space-separated integers, representing the values of the second matrix.

### ***Output Format***

The output prints the addition of the two matrices in N rows and M columns, representing the combined temperature record.

Refer to the sample output for formatting specifications.

### ***Sample Test Case***

Input: 3 3

1 2 3

4 5 6

7 8 9

1 1 1

2 2 2

3 3 3

Output: 2 3 4

6 7 8

10 11 12

### ***Answer***

```
import java.util.Scanner;

public class Main {
    public static void main(String[] args) {
        Scanner scanner = new Scanner(System.in);
        int a = scanner.nextInt();
        int b = scanner.nextInt();
        int[][] arr1 = new int[10][10];
        int[][] arr2 = new int[10][10];
        for (int i = 0; i < a; i++) {
            for (int j = 0; j < b; j++) {
                arr1[i][j] = scanner.nextInt();
            }
        }
        for (int i = 0; i < a; i++) {
            for (int j = 0; j < b; j++) {
                arr2[i][j] = scanner.nextInt();
            }
        }
    }
}
```

```
        }
    int[][] res = new int[a][b];
    for (int i = 0; i < a; i++) {
        for (int j = 0; j < b; j++) {
            res[i][j] = arr1[i][j] + arr2[i][j];
        }
    }
    for (int i = 0; i < a; i++) {
        for (int j = 0; j < b; j++) {
            System.out.print(res[i][j] + " ");
        }
        System.out.println();
    }
    scanner.close();
}
}
```

**Status :** Correct

**Marks :** 10/10
